

**HIGH
PERFORMANCE**

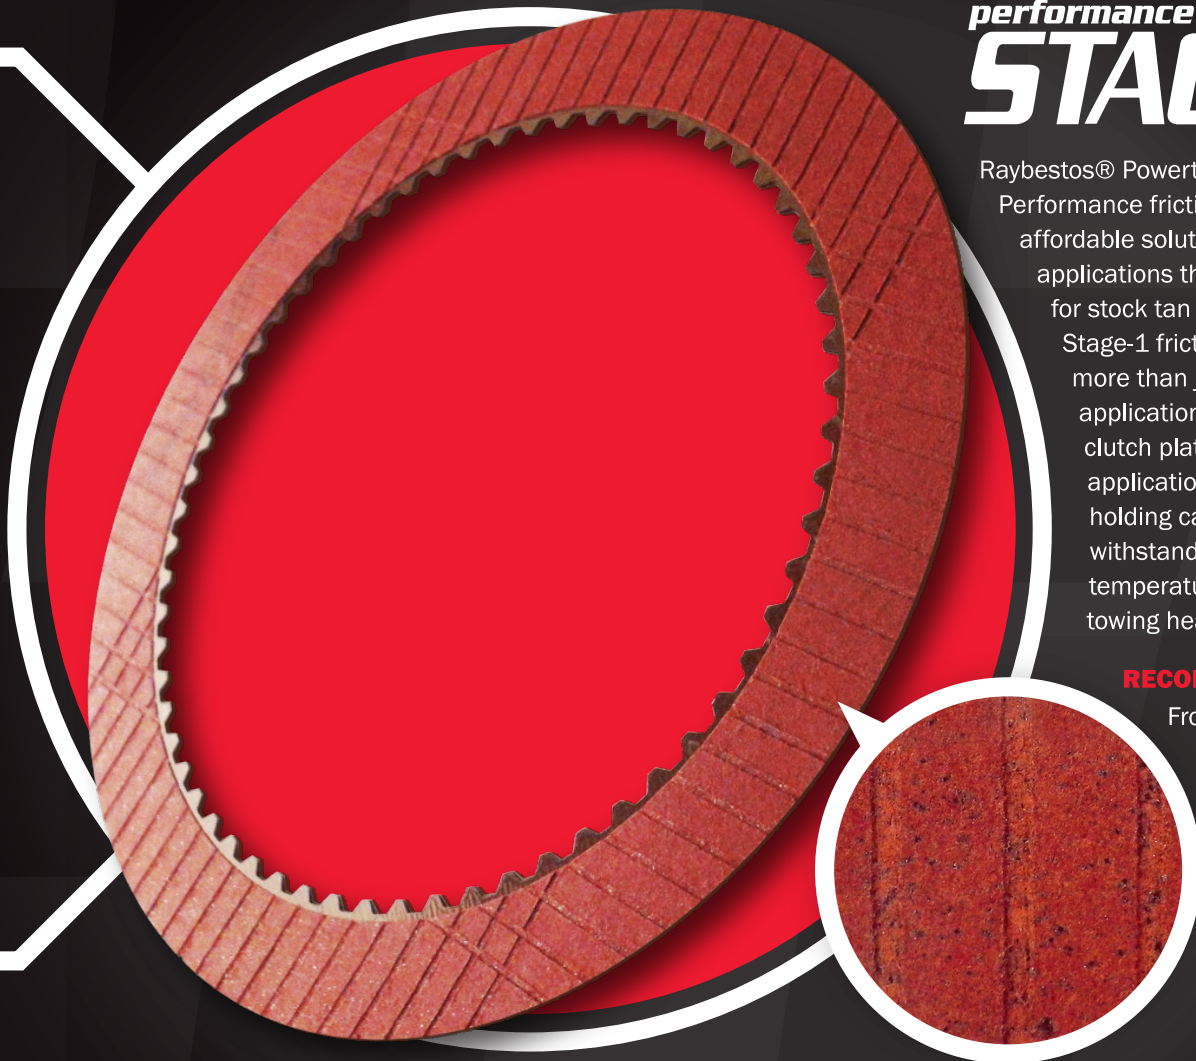

performance frictions **STAGE-1**

Raybestos® Powertrain's Stage-1 Performance frictions provide a durable, affordable solution for performance applications that are too demanding for stock tan or high-energy plates. Stage-1 frictions work hard for more than just performance applications; our red friction clutch plates enhance heavy-duty applications by increasing holding capacity and withstanding the higher temperatures associated with towing heavy loads.

RECOMMENDED USE:

Front- and rear-wheel drive domestic and import street-strip, "Tuner" and off-road performance applications.
