

**ENHANCED
PERFORMANCE**

KOLENE® STEEL

High quality and high performance: Raybestos® Powertrain's Kolene® steel clutch plates. A thermochemical diffusion process forges these steel plates in molten salt with a specific nitrogen potential. In plain English, this salt bath nitriding process creates a surface with wear and fatigue resistance enhanced by 200 to 500 percent. Kolene® plates also offer higher heat resistance and increased lubricity. (Kolene® is a registered trademark of the Kolene Corporation.)

RECOMMENDED USE:
Enhanced performance rebuilds.
